

ABSTRACT

An improved disposable combination animal waste pickup device and bag for sanitary pickup and disposal of animal waste has a first pickup portion formed from a cut-out blank, folded and sealed to a second holding portion, such as a bag, whereby animal waste may be picked up by the first pickup portion and sealingly held in the bag. The first pickup portion also includes a handle that is grasped by a user to cause the first pickup portion and bag to fold into each other so as to prevent leakage or loss of any waste in the bag.
